Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**DETAILED ACTION**

***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-8 are rejected under 35 U.S.C. 102(b) as being anticipated by DE 1926441, cited by Applicant.

The DE '441 patent publication discloses a crop divider (3) for a harvesting assembly. The crop divider is provided with a deflector that is mounted to the harvesting assembly by a pivot link having a pivot axis (6). The deflector is pivoted about the pivot axis from an operating position (Fig. 2) to a transport position (Fig 1). The deflector is locked in the operating position by an arresting element (Fig. 5, 15) having a locking position. When the element is in the locking position, the arresting element encloses and locks the pivot link on both sides of the pivot axis (6) (i.e., the element (15) is on both sides (left and right) of a line extending parallel to the tubes (2) and (3) and intersecting the axis of the pivot link).

Regarding claims 2-8: The pivot link is mounted on a first (2) and second (3) tube. The arresting element (15) is slidably positioned on the tubes. The arresting element (15) is biased by a spring (18) into the locking position. The arresting element also locks the pivot link in the transport position (Fig. 6). The arresting element extends into a recess (14).
